

The *DSP-4080* is a powerful DSP based audio processor, ideally suited for install and live applications, where it combines the functions of a multitude of conventional products in a compact unit, with extensive remote control capabilities.

Features

- 4 inputs and 8 outputs - native processing runs at 96k resulting in wider bandwidth (over 30kHz).
- Optimized converters - lower noise and optimized distortion figures.
- Extended processing capabilities - 9 full bandwidth parametric bands available on every output, all switchable between PEQ, high and low shelving responses, high / low pass variable 'Q' filters, Notch filter, Bandpass filter, All pass filter, Phase filter, and elliptical filters.
- Crossover filters on each output offer 48dB/Oct. responses. A gentle 6dB/Oct roll-off response is also included.
- Flexible routing matrix available - in addition to standard fixed configurations such as 2 x 3 way (standard configs are still implemented), any output may be fed from any input or sum of inputs. Edit buttons show routing instantly when pressed.
- Program and Clip Limiters - Look-ahead limiters with automatic and manual time constant facilities.
- Delay memory allows for up to 650mS from any input to any output - extra fine delay resolution on outputs for driver alignment, in 30nS (0.1mm) steps!
- Extended memory capacity - user memories extended from 9 to a maximum of 256.
- Remote control via RS232 or RS485 ports, with AudioCore software.
- 2 x 24 character display with new low profile buttons.
- Auto switching power supply works worldwide on all voltages.
